DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sampson in view of Official Notice.

Sampson teaches a method and apparatus for electronically performing bookkeeping upon a plurality of accounting journal entries comprising a parental set for a predetermined period of time, each journal entry of the plurality of accounting journal entries having a transaction identifier, at least one account number (source identifier) and at least one data component associated with each account number (income amount total value), each journal entry having been prepared based upon criteria associated with a particular definition within a predetermined chart of accounts.

First, the predetermined chart of accounts associated with the plurality of journal entries is read electronically. The predetermined chart of accounts must have at least one account number and each account number has an opening balance. A set of account-section numbers is then created for each account number. The plurality of journal entries is read and one of the account-section numbers is assigned to each of the account numbers in the journal entry.

(Identifying an income account associated with a department based on income source identifier)

Art Unit: 3627

The assigned account-section numbers along with the associated data components are then sorted in a predetermined order. A design for the predetermined order is identified and compared with stored design records to see if such a design already exists. If not, the new design is stored. If so, the associated data components are added to the accumulated total for each account-section number. A tally representing the number of additions to the set of account-section numbers is increased by one and an entry number is added to a list for the particular design record. The process is then repeated for each journal entry (collating and combining data of income accounts during a time period).

In addition Sampson teaches, Opening balances may be updated periodically by adding the accumulated totals for all of the account-section numbers. Account numbers may include an indicator of criteria associated with the particular definition of the predetermined chart of accounts. For example, if double-entry bookkeeping is performed, the criteria would indicate that separate account-section numbers should be created and assigned for debit and credit for each account number. A sparse matrix of n-dimension may be used for creating, searching for, and accumulating totals for designs which identify the journal entries. (column 3; line 66 – column 4; line 43).

Examiner references Figure 8 and notes that the system of Sampson creates financial statement records. Specifically Accounts receivable, sales tax payable and sales are examples from Figure 8 of these records which are created.

Sampson further teaches the present system and method are useful for many large enterprises that generate large volumes of data entries, where each such entry has associated with it one of more items representing important information. Examiner notes that Sampson does not

Application/Control Number: 10/614,649

Art Unit: 3627

specifically mention a hospital. However, Examiner takes official Notice that it is old and well known that hospitals are large enterprises that generate large volumes of data entries, where each such entry has associated with it one of more items representing important information. In fact Applicant so much as admits this fact in the arguments presented with the amendment filed on 10/19/04. Applicant asserts that the Barber reference fails to teach a hospital which "has far more complex income sources and income processing procedures".

As such, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the teaching of Sampson to specifically name a hospital as an enterprise that generates large volumes of data entries. One of ordinary skill would have been motivated to modify the reference in order to specifically illustrate some examples of large and complex organizations.

Claim 2 requires that the received message data identify medical insurance reimbursement income amounts received for services rendered to patients during a time period. Examiner notes that this data is old and well known in the medical and hospital arts. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the at least one account number (source identifier) and at least one data component associated with each account number (income amount total value) of Sampson to include medical insurance reimbursements in order include all the accounts of a hospital.

Conclusion

Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 3627

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Kramer whose telephone number is (703) 305-5241. The examiner can normally be reached on Monday - Friday (8AM - 5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Chilcot can be reached on (703) 305-4716. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
